Introduction : In this assignment, we are performing System Testing on a REST API called Jira-Lite Via Postman . It is a lightweight issue-tracking system where users can create teams, manage project

Scope of Testing : Module	Endpoints to be Tested	Purpose
3 Authentication	POST [[baseURL]]/auth/register [[baseURL]]/auth/login	To create a new user account. To authenticate a user and get a JWT token.
4 Users	GET [[baseURL]]/users/{aliceId}	To retrieve the profile details of a specific user.
	PATCH [[baseURL]]/users/profile	TO update the current user's profile information (like username or email).
5 Team	POST [[baseURL]]/teams	To create a new team in the system.
	GET [[baseURL]]/teams/{teamId}	To view details and members of a specific team
	DEL [[baseURL]]/teams/{teamId}	To remove a specific member from the team.
Projects	POST [[baseURL]]/projects	To create a new project (either open or assigned to a team).
	GET [[baseURL]]/projects	To list all available projects.
	POST [[baseURL]]/projects?teamId={teamId}	To filter and view projects belonging to a specific team.
Issues	POST [[baseURL]]/projects/{projectId}/issues	To create a new issue under a specific project.
	GET [[baseURL]]/projects/{projectId}/issue [[baseURL]]/issues/status=open [[baseURL]]/issues/status=assigned [[baseURL]]/issues/{issueId}/submit	To list all issues related to a specific project. To filter and view all issues that are currently in 'open' status. To filter and view issues created by a specific user. To mark an in-progress issue as resolved.
Issue Life Cycle	PATCH [[baseURL]]/issues/{issueId}/abandon [[baseURL]]/issues/wrong-id-456 [[baseURL]]/issues/{issueId}/accept	To stop working on an issue and return it to 'open' status. To verify error handling (404) for non-existent issue IDs. To mark a resolved issue as closed (completed).
		To return a closed or resolved issue back to 'open' status for further work.
Edge Life Cycle	POST [[baseURL]]/issues/{issueId}/comments	To add a comment or a reply to a specific issue.
	GET [[baseURL]]/issues/wrong-id-789/comments	To verify if the system returns a 404 error for comments on a non-existent issue.
